

## Some positive findings

Safety Flash Published on 28 May 2026 Generated on 28 May 2026 IMCA SF 10/26

- **Controlled Contractor Induction Process**
- **Effective Gangway Induction and Documentation Control**
- **Safe Positioning and Good Communication During Lifting Operations**

### Controlled Contractor Induction Process

A centralized induction process ensures all contractors working on a vessel or at a site, are properly briefed before starting work. Upon completion, they receive clearly identifiable induction stickers for easy verification on site. This strengthens compliance, enhances safety, and demonstrates commitment to a well-controlled working environment.

### Effective Gangway Induction and Documentation Control

On a vessel alongside, crew demonstrated a high standard of safety awareness by effectively delivering visitor induction at the gangway. Relevant policies, procedures, and induction checklists were readily available and properly maintained at the gangway station. This ensured that personnel boarding the vessel could be briefed on safety requirements and vessel rules prior to access, supporting strong access control and promoting a safe working environment onboard.

## Safe Positioning and Good Communication During Lifting Operations

Lifting crew maintained a safe distance from moving cargo during deck lifting operations. Good use of hand tools was observed to guide the load and minimize potential cargo impact. This demonstrates strong safety awareness and adherence to safe lifting practices.
