

IN 1314 – Safety & Environment statistics for IMCA members: Report for the period 1 January-31 December 2015

Information Note Published on 21 June 2016

IMCA produces an annual report of safety and environment statistics (covering fatalities, injuries, leading indicators and environmental indicators) supplied by contractor Members.

This Information Note reports detailed annual statistics for 2015.

Safety and environment statistics remain a useful insight into the performance of a company and industry sector in the areas of health, safety and environment. The purpose of these statistics is to record the safety and environment performance of IMCA contractor Members each year and to enable IMCA Members to benchmark their performance.

Statistics were provided by 251 companies and organisations, representing around 55% of the contractor membership, excluding drilling contractors and contractors who report as part of a greater group.

A further nine contractors responded noting that they had no safety data to provide.

Thirty-six contractors took part for the first time. IMCA would like to thank all those who took part in this important annual benchmarking exercise.
